NOTE 16: FINANCIAL RISK MANAGEMENT

(a) Liquidity Risk

Liquidity risk is the risk that the Fund may not be able to generate sufficient cash resources to settle its obligations in full as they fall due or can only do so on terms that are materially disadvantageous.

The Fund holds investments in a partially developed port, which are not considered to be assets that are readily realisable. In order to address this risk, the Trustee retains broad discretion to restrict distributions, withdrawals and/or redemptions.

(b) Infrastructure Risk

Infrastructure risk includes the risk of development and construction of the port. Performance of an investment in the Trust is dependent on asset development in line with projected timetables and on budget. Increased costs or time delays can impact on return on investment, including through a delay in commencement of operations, higher capital costs or debt funding or reduced revenue.

In addition, T-Ports will be undertaking the port development management on behalf of the Trust. If the port operator is ineffective then there will be impacts on revenue, operating expenses and return on investment. Accordingly, investors are exposed to the performance capabilities of T-Ports development management offering. While port operations could be outsourced to established grain port operators as an alternative, this is likely to increase the cost base of the operations beyond the figures modelled and may also have other impacts on grain seller and purchaser dynamics, which again could negatively impact the returns.
